What Is NLP?

In simple words

NLP helps computers understand the language that humans speak and write.

How computers read language

1. Break the text into small words
2. Turn the words into numbers
3. Find patterns to get the meaning

Where we see NLP

ChatGPT

Understands your question and writes a reply

Google Translate

Changes text from one language to another

Voice assistants

Listen to your voice and do what you ask

Edit with WPS Office

What Is Sentiment Analysis?

It finds the feeling or opinion inside a piece of text. It tells us if the writer is happy, unhappy, or neutral.

Positive

Happy, good opinion

"I love this phone!"

Negative

Unhappy, bad opinion

"This phone is terrible."

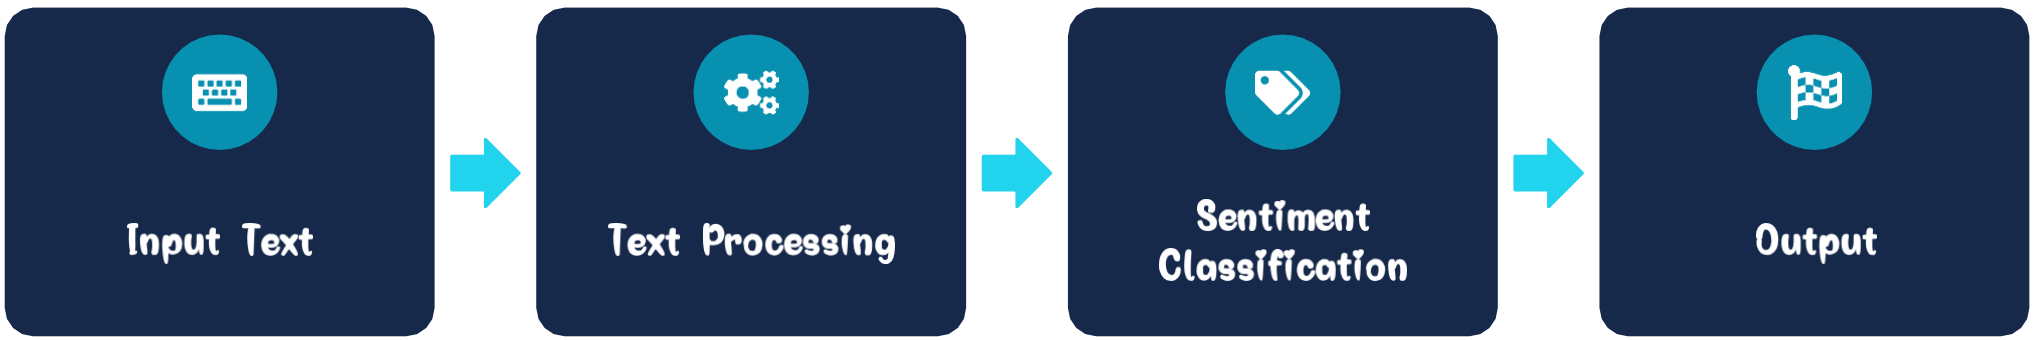

Neutral

Just a fact, no feeling

"The phone is available in black."

Edit with WPS Office

How Does It Work?

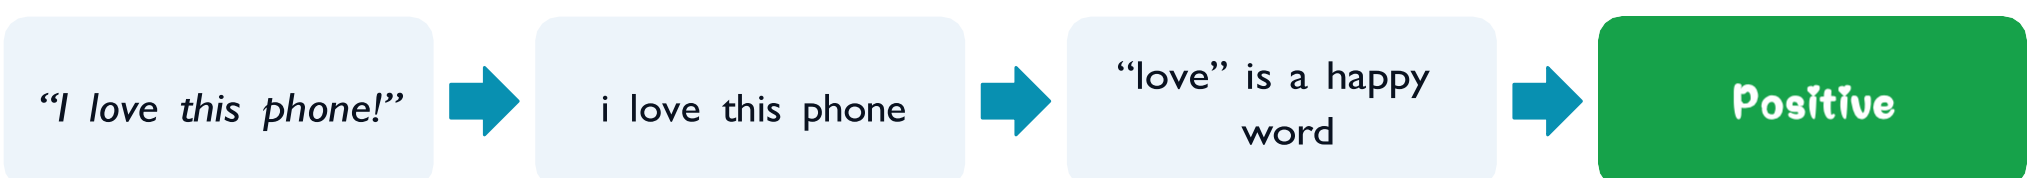

We give the computer a sentence or review.

Clean the text and split it into words.

A trained model checks the words and picks a feeling.

The result: Positive, Negative, or Neutral.

EXAMPLE

Edit with WPS Office

Real-Life Applications

Product Reviews

Shows if buyers like a product.

Example: Do shoppers love or dislike a new phone?

Social Media

Finds how people feel about a topic.

Example: Reactions to a new movie trailer

Customer Feedback

Sorts survey replies fast.

Example: Spot unhappy customers early

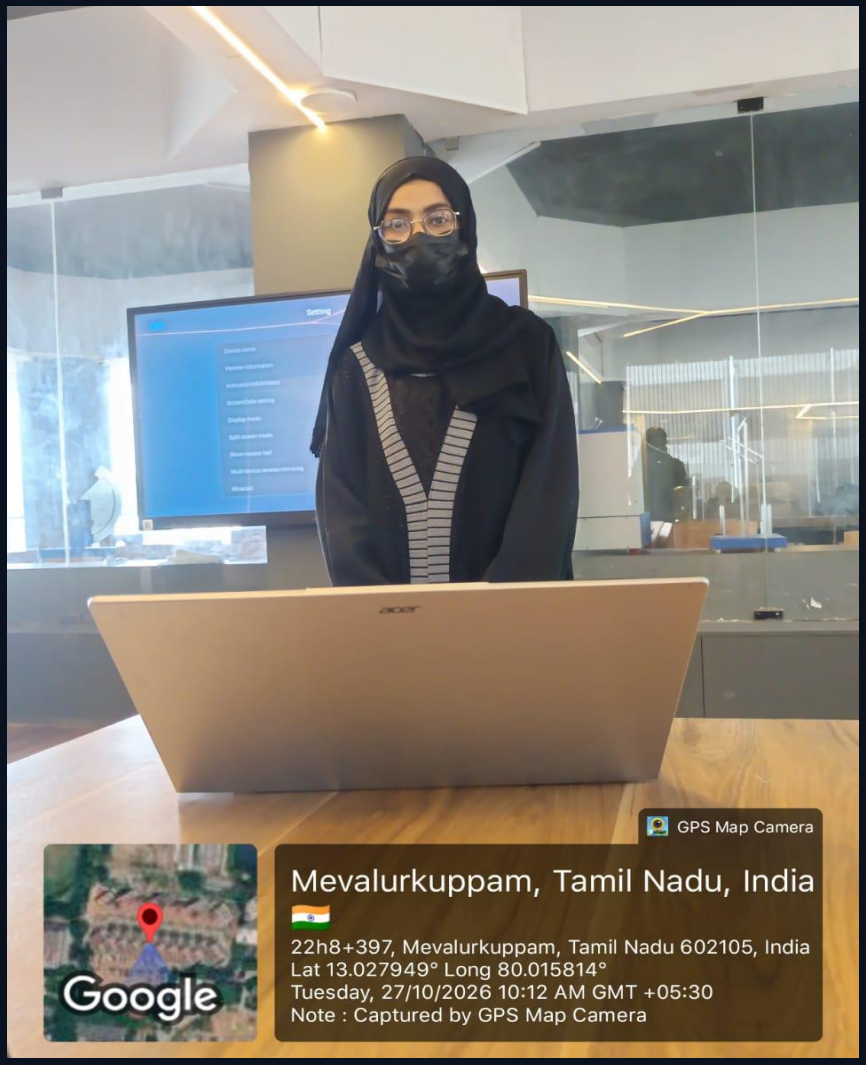

Business Improvement

Shows what to fix and what to keep.

Example: Many slow-delivery complaints? Improve delivery
